### **Introduction**

Coronavirus is a disease, which is spreading very fast amongst the human beings. The influence of the COVID-19 pandemic on the education system leads to schools and colleges' widespread closures worldwide. On March 24<sup>th</sup>, India declared a country wide lockdown of schools and colleges for preventing the transmission of the coronavirus amongst the students. School closures in response to the COVID-19 have affecting several issues to education. As a versatile platform for learning and teaching processes, the E-learning framework has been increasingly used. E-learning is defined as a new platform of online learning based on information technology. In contrast to online classes, students are facing many problems to attend the classes. Only by the analysing students' problems the answer be sought. The data were collected by the 50 respondents by the high school students under state board syllabus.

### **Statement of problem**

Nowadays, Online education is very difficult on the students. It's very difficult to listen the in classes in the online because the internet connection is very low, network error happens in sometimes then students are not interested to listen the classes and mind divert to some other

work.

### Importance of the study

This is an analysis on High school children preference towards online education Under state board syllabus. An attempt has been made by the research to know the preference, understanding, and satisfaction etc.

### Objective of the study

- To analyses the analysis and difficulties of online education
- To know the impact of online education on the students mental health

### Research Methodology

For this study, the students difficulties about online education data has been collected. The students survey had a three sections of socio economic questionnaires and 18 questionnaire regarding students perception about attending online classes and the performance . The students were asked to tell what according to them were the positive and negative aspects of online teaching and what were the applications usually used by them to take online classes. Response choices consisted of pre-defined options of yes or no , easy or difficult and other options . The data was collected by the 50 respondents of high school students under state board syllabus where 50 students have completed the entire questionnaires prepared. The data was shared with respondents by the hard copies.

### Findings and Result

Socio- economic characteristics may influence the main purpose of the study was to gather evaluate feedback from the high school students on their experience about online mode of teaching.

### Difficulties of online education on High school children

There are many difficulties faced by the high school students for attending the online classes without reliable internet access and technology struggle to participate in digital learning and understanding capacity of students in online is very low.

**Table 1: Difficulties of online education**

Difficulties	No of respondents	Percentage
Yes	23	46
No	27	54
Total	50	100

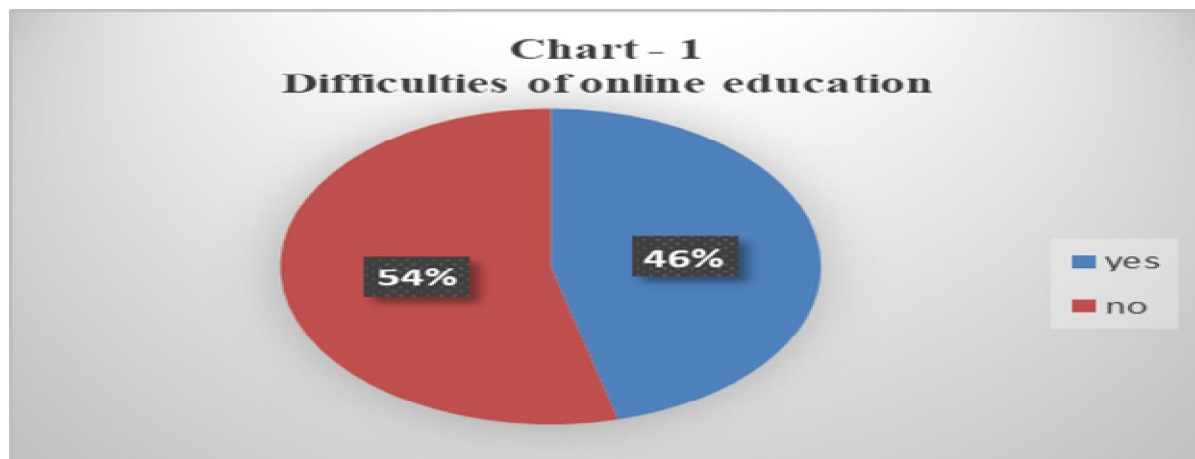

Table 1 studies about the difficulties faced by online education. 46% of students have faced difficulties from the online education and 54% of students have not faced any difficulties from online education.

#### Understanding lessons through the online classes

This shows 96% of students have faced various kinds of mental health and only 4% of students not faced any of the symptoms by the online education.

### Results

The survey was done to get an understanding of the experience and perception of students about the recently introduced online mode of teaching. The students reported that they preferred to classroom teaching method more than online teaching mode as per the survey done. As per the data analysis 50 students of high school preferred to traditional learning.

### Discussion

The result of this study discuss that traditional learning was positively in terms of activities done in traditional classroom , interaction between students and teachers , satisfaction of understanding the lessons and overall quality . Even though the online classes were convenient in term of saving time technical support was found to be an important factor critical to determining dissatisfied with online classes. The students showed dissatisfaction towards online classes when instructors were unavailable to provide technical support. Hence, this survey shows most of the students from high school students under state board syllabus have many problems like mental health issues and financial problems and so on.

### Conclusion

During pandemic situation students difficulties and teachers learning habits are discussed here and many difficulties are not recognised and many have so many problems about the online education system to involve there life and get adjusted to it and try to understand the lessons through online classes and the data have been collected from the 50 students about the online education classes and founded there difficulties about the online education classes.
